

*Leopardo*, designed by Alexandre Bassi, draws inspiration from rich chancery models created by writing masters of the 16th and 17th centuries, offering a boldly contemporary interpretation.

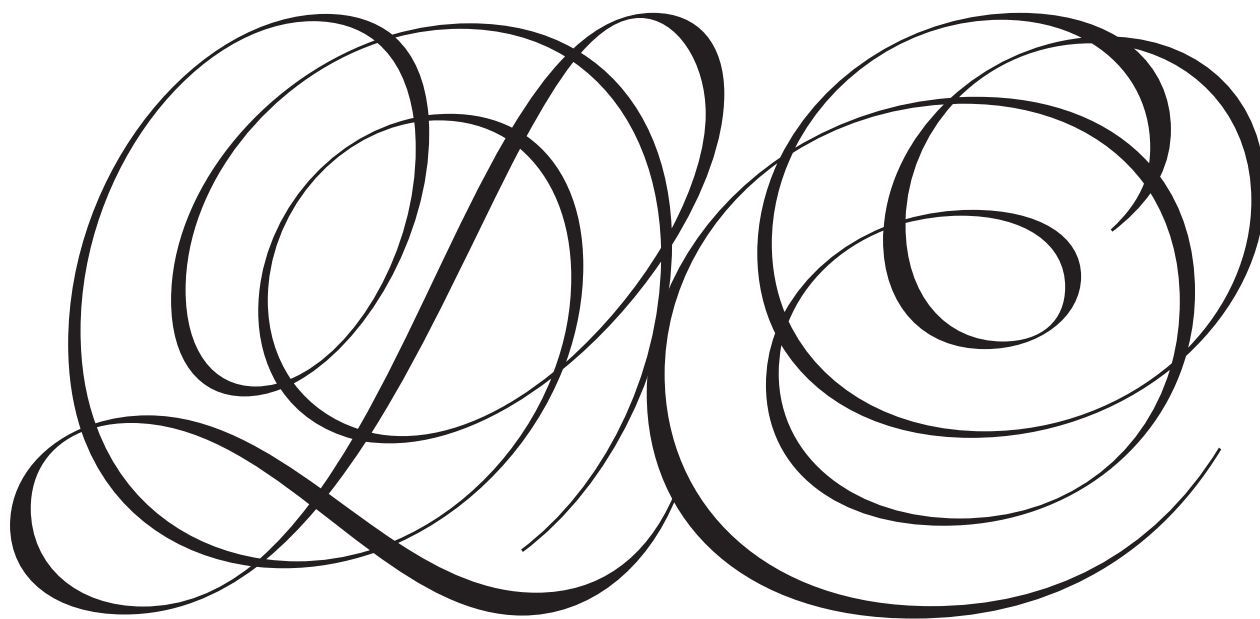

Alexandre Bassi developed a deep fascination for these calligraphic models, captivated by the complexity and freedom of their shapes, sometimes pushing them to the limits of exuberance. Originally drawn with thin nibs and engraved on copper, these works significantly affected the initial sketches of Round hand script. *Leopardo* takes its name from the writing manual *De caratteri di Leopardo Antonozzi*, which greatly influenced the type designer.

*Leopardo* captures the vitality of the calligraphic gesture while maintaining the stability and coherence of a typographic system. The design reveals a rich variety of details, characterized by a quick ductus, pronounced contrast, sharp terminals, and recurring drops, which liven up the typographic colour.

This display typeface comes in four styles: *Laser*, *Thin*, *Light*, and *Regular*. It offers a generous palette of glyphs and style variants, with numerous ligatures, as well as initial and final letters that enhance typographic compositions.

## INTRODUCTION

## OWNERSHIP AND LICENCE

A typeface is created by a designer whose art is to transform an original typographic artwork into a computer file or files. As a consequence a typeface is – as a work – protected by laws pertaining to intellectual property rights and – as software – can not be copied and/or installed without first acquiring a nominative licence.

In no way, shape or form may a typeface be transmitted to a third party or modified. The desired modifications in the context of the development of a visual identity, can only be effected by the designer himself and only after acquisition of a written authorisation from 205TF.

The user of a 205TF typeface must first acquire of a licence that is adapted to his needs (desktop, web, application/epub, TV/film/videos web).

A licence is nominative (a physical person or business) and is non-transferable. The licensee can not transmit the typeface files to other people or organisations, including but not limited to partners and/or subcontractors who must acquire a separate and distinct licence or licences. The full text of the licence and terms of use can be downloaded here: any person or entity found in breach of one or more terms of the licence may be prosecuted.

## THE OPENTYPE FORMAT

The OpenType format is compatible with both Macintosh and Windows platforms. Based on Unicode encoding it can contain up to 65,000 signs\* including a number of writing systems (Latin, Greek, Cyrillic, Hebrew, etc.) and numerous signs that allow users to create accurate and sleek typographic compositions

(small capitals, aligned and oldstyle numerals, proportionals and tabulars, ligatures, alternative letters, etc.). The OpenType format is supported by a wide range of software. The dynamic functions are accessed differently depending on the software used.

\*A Postscript or Truetype typeface can contain no more than 256 signs.

ELEMENTARY PRINCIPLES OF USE

**To buy ore** By buying a typeface you support typeface designers who can dedicate the time necessary for the development of new typefaces (and you are of course enthusiastic at the idea of discovering and using them!)

**Copy?** By copying and illegally using typefaces, you jeopardise designers and kill their art. In the long term the result will be that you will only have Arial available to use in your compositions (and it would be well deserved!)

**Test!** 205TF makes test typefaces available. Before downloading them from [www.205.tf](http://www.205.tf) you must first register. These test versions are not complete and can only be used in models/mock ups. Their use in a commercial context is strictly prohibited.

---

RESPONSIBILITY

205TF and the typeface designers represented by 205TF pay particular attention to the quality of the typographic design and the technical development of typefaces.

Each typeface has been tested on Macintosh and Windows, the most popular browsers (for webfonts) and on Adobe applications (InDesign, Illustrator, Photoshop) and Office (Word, Excel, Power point).

205TF can not guarantee their correct functioning when used with other operating system or software. 205TF can not be considered responsible for an eventual “crash” following the installation of a typeface obtained through the [www.205.tf](http://www.205.tf) website.
