

Designed by Roman Seban, the modular typeface *Bertin* is inspired by the work of the famous French cartographer Jacques Bertin and Dutch graphic designer Jurriaan Schrofer.

In 1967, Jacques Bertin (1918–2010) published *Semiology of Graphics: Diagrams, Networks, Maps*, a fundamental treatise in contemporary cartographic thinking. In this book, he established a series of parameters for representing information, defining six visual variables which he used to construct his graphical system.

In 1973, Jurriaan Schrofer (1926–1990) designed the cover of a reprint of *Semiology of Graphics*. He proposed a typographic application of Bertin's graphical system. His typeface, constructed on a grid with a highly rigorous approach, typographically illustrates the six visual variables defined by the cartographer.

With *Bertin*, Roman Seban presents a synthetic and revitalized interpretation of both the cartographer's and the graphic designer's work. Thanks to variable font technology, the different styles of the typeface combine multiple axes of visual variables.

The *Bertin* typeface can be divided into two families—*Bertin Dot* and *Bertin Square*—built with an identical frame, but based on two different modules. *Bertin Dot* uses the circle whereas *Bertin Square* employs the square.

*Bertin Dot* and *Bertin Square* are respectively deployed in 6 styles, based on 6 transformations:

- **Size:** reduction or enlargement of the modules;
- **Shape:** a horizontal or vertical compression of the modules;
- **Value:** like a gradient, a gradual variation in the size of the modules, from bottom to top or from top to bottom;
- **Multi:** a combination of the Shape and Value styles;
- **Rotation:** rotation of the modules from 0 to 180°;
- **Orientation:** rotation of the modules towards a common vanishing point.

The axes of variable fonts enable a gradual transformation of the modules, allowing users to adjust the desired effect according to their preferences.

The originality of *Bertin* allows it to be adapted to different use contexts. It is clearly a display typeface: the boldest choices allow for the composition of spectacular titles, whereas more restrained settings ensure legible running text, even in smaller sizes.

Regardless of the variable setting applied, each glyph shares the same metrics. This lets the user overlay the same text composed in different styles and infinitely multiply the formal possibilities.

## INTRODUCTION

## OWNERSHIP AND LICENCE

A typeface is created by a designer whose art is to transform an original typographic artwork into a computer file or files. As a consequence a typeface is – as a work – protected by laws pertaining to intellectual property rights and – as software – can not be copied and/or installed without first acquiring a nominative licence.

In no way, shape or form may a typeface be transmitted to a third party or modified. The desired modifications in the context of the development of a visual identity, can only be effected by the designer himself and only after acquisition of a written authorisation from 205TF.

The user of a 205TF typeface must first acquire of a licence that is adapted to his needs (desktop, web, application/epub, TV/film/videos web).

A licence is nominative (a physical person or business) and is non-transferable. The licensee can not transmit the typeface files to other people or organisations, including but not limited to partners and/or subcontractors who must acquire a separate and distinct licence or licences. The full text of the licence and terms of use can be downloaded here: any person or entity found in breach of one or more terms of the licence may be prosecuted.

## THE OPENTYPE FORMAT

The OpenType format is compatible with both Macintosh and Windows platforms. Based on Unicode encoding it can contain up to 65,000 signs\* including a number of writing systems (Latin, Greek, Cyrillic, Hebrew, etc.) and numerous signs that allow users to create accurate and sleek typographic compositions

(small capitals, aligned and oldstyle numerals, proportionals and tabulars, ligatures, alternative letters, etc.). The OpenType format is supported by a wide range of software. The dynamic functions are accessed differently depending on the software used.

\*A Postscript or Truetype typeface can contain no more than 256 signs.

ELEMENTARY PRINCIPLES OF USE

**To buy ore** By buying a typeface you support typeface designers who can dedicate the time necessary for the development of new typefaces (and you are of course enthusiastic at the idea of discovering and using them!)

**Copy?** By copying and illegally using typefaces, you jeopardise designers and kill their art. In the long term the result will be that you will only have Arial available to use in your compositions (and it would be well deserved!)

**Test!** 205TF makes test typefaces available. Before downloading them from [www.205.tf](http://www.205.tf) you must first register. These test versions are not complete and can only be used in models/mock ups. Their use in a commercial context is strictly prohibited.

---

RESPONSIBILITY

205TF and the typeface designers represented by 205TF pay particular attention to the quality of the typographic design and the technical development of typefaces.

Each typeface has been tested on Macintosh and Windows, the most popular browsers (for webfonts) and on Adobe applications (InDesign, Illustrator, Photoshop) and Office (Word, Excel, Power point).

205TF can not guarantee their correct functioning when used with other operating system or software. 205TF can not be considered responsible for an eventual “crash” following the installation of a typeface obtained through the [www.205.tf](http://www.205.tf) website.

205TF is a trademark of 205 Corp.

Designed by Roman Seban, the modular typeface *Bertin* is inspired by the work of the famous French cartographer Jacques Bertin and Dutch graphic designer Jurriaan Schrofer.

In 1967, Jacques Bertin (1918–2010) published *Semiology of Graphics: Diagrams, Networks, Maps*, a fundamental treatise in contemporary cartographic thinking. In this book, he established a series of parameters for representing information, defining six visual variables which he used to construct his graphical system.

In 1973, Jurriaan Schrofer (1926–1990) designed the cover of a reprint of *Semiology of Graphics*. He proposed a typographic application of Bertin's graphical system. His typeface, constructed on a grid with a highly rigorous approach, typographically illustrates the six visual variables defined by the cartographer.

With *Bertin*, Roman Seban presents a synthetic and revitalized interpretation of both the cartographer's and the graphic designer's work. Thanks to variable font technology, the different styles of the typeface combine multiple axes of visual variables.

The *Bertin* typeface can be divided into two families—*Bertin Dot* and *Bertin Square*—built with an identical frame, but based on two different modules. *Bertin Dot* uses the circle whereas *Bertin Square* employs the square.

*Bertin Dot* and *Bertin Square* are respectively deployed in 6 styles, based on 6 transformations:

- **Size:** reduction or enlargement of the modules;
- **Shape:** a horizontal or vertical compression of the modules;
- **Value:** like a gradient, a gradual variation in the size of the modules, from bottom to top or from top to bottom;
- **Multi:** a combination of the Shape and Value styles;
- **Rotation:** rotation of the modules from 0 to 180°;
- **Orientation:** rotation of the modules towards a common vanishing point.

The axes of variable fonts enable a gradual transformation of the modules, allowing users to adjust the desired effect according to their preferences.

The originality of *Bertin* allows it to be adapted to different use contexts. It is clearly a display typeface: the boldest choices allow for the composition of spectacular titles, whereas more restrained settings ensure legible running text, even in smaller sizes.

Regardless of the variable setting applied, each glyph shares the same metrics. This lets the user overlay the same text composed in different styles and infinitely multiply the formal possibilities.

## INTRODUCTION

## OWNERSHIP AND LICENCE

A typeface is created by a designer whose art is to transform an original typographic artwork into a computer file or files. As a consequence a typeface is – as a work – protected by laws pertaining to intellectual property rights and – as software – can not be copied and/or installed without first acquiring a nominative licence.

In no way, shape or form may a typeface be transmitted to a third party or modified. The desired modifications in the context of the development of a visual identity, can only be effected by the designer himself and only after acquisition of a written authorisation from 205TF.

The user of a 205TF typeface must first acquire of a licence that is adapted to his needs (desktop, web, application/epub, TV/film/videos web).

A licence is nominative (a physical person or business) and is non-transferable. The licensee can not transmit the typeface files to other people or organisations, including but not limited to partners and/or subcontractors who must acquire a separate and distinct licence or licences. The full text of the licence and terms of use can be downloaded here: any person or entity found in breach of one or more terms of the licence may be prosecuted.

## THE OPENTYPE FORMAT

The OpenType format is compatible with both Macintosh and Windows platforms. Based on Unicode encoding it can contain up to 65,000 signs\* including a number of writing systems (Latin, Greek, Cyrillic, Hebrew, etc.) and numerous signs that allow users to create accurate and sleek typographic compositions

(small capitals, aligned and oldstyle numerals, proportionals and tabulars, ligatures, alternative letters, etc.). The OpenType format is supported by a wide range of software. The dynamic functions are accessed differently depending on the software used.

\*A Postscript or Truetype typeface can contain no more than 256 signs.

ELEMENTARY PRINCIPLES OF USE

**To buy ore** By buying a typeface you support typeface designers who can dedicate the time necessary for the development of new typefaces (and you are of course enthusiastic at the idea of discovering and using them!)

**Copy?** By copying and illegally using typefaces, you jeopardise designers and kill their art. In the long term the result will be that you will only have Arial available to use in your compositions (and it would be well deserved!)

**Test!** 205TF makes test typefaces available. Before downloading them from [www.205.tf](http://www.205.tf) you must first register. These test versions are not complete and can only be used in models/mock ups. Their use in a commercial context is strictly prohibited.

---

RESPONSIBILITY

205TF and the typeface designers represented by 205TF pay particular attention to the quality of the typographic design and the technical development of typefaces.

Each typeface has been tested on Macintosh and Windows, the most popular browsers (for webfonts) and on Adobe applications (InDesign, Illustrator, Photoshop) and Office (Word, Excel, Power point).

205TF can not guarantee their correct functioning when used with other operating system or software. 205TF can not be considered responsible for an eventual “crash” following the installation of a typeface obtained through the [www.205.tf](http://www.205.tf) website.

## CHARACTER MAP

[illegible]

## OPENTYPE FEATURES

1. Automatically spaced capitals.
2. Punctuation is optically repositionning
- 3, 4. Specific small capitals whereas optically reduced capitals.
5. Specific glyphs in several languages.
- 6, 7, 8, 9. Specific superior and inferior glyphs.
- 10, 11. Proportional figures.
- 12, 13. Tabular figures, practical when the user needs alignment in columns.
14. Slashed zero to distinguish with letter O.
15. Standard ligatures automatically correct collision between two characters.
16. Smart ligatures.

SHAPE 0/1000

142 PTS

The first two rows of the font display are composed of 142 unique glyphs. The first row contains 14 glyphs, and the second row contains 128 glyphs. The glyphs are arranged in a grid-like pattern, with each glyph consisting of a series of vertical lines of varying heights and thicknesses, creating a dense, textured appearance.

82 PTS

The next two rows of the font display are composed of 82 unique glyphs. The first row contains 14 glyphs, and the second row contains 68 glyphs. The glyphs are arranged in a grid-like pattern, with each glyph consisting of a series of vertical lines of varying heights and thicknesses, creating a dense, textured appearance.

44 PTS

The final row of the font display is composed of 44 unique glyphs. The glyphs are arranged in a single row, with each glyph consisting of a series of vertical lines of varying heights and thicknesses, creating a dense, textured appearance.

SHAPE 450/0

142 PTS

The first part of the  
 design is a large, bold,  
 stylized letter 'E' made of  
 horizontal bars. To its right  
 is a smaller, more complex  
 shape made of vertical and  
 horizontal bars, resembling a  
 stylized 'C' or 'G'. Below  
 these are two more rows of  
 stylized letters, 'L' and 'S',  
 followed by a row of 'T' and 'A',  
 and finally a row of 'R' and 'N'.

82 PTS

The second part of the  
 design is a large, bold,  
 stylized letter 'E' made of  
 horizontal bars. To its right  
 is a smaller, more complex  
 shape made of vertical and  
 horizontal bars, resembling a  
 stylized 'C' or 'G'. Below  
 these are two more rows of  
 stylized letters, 'L' and 'S',  
 followed by a row of 'T' and 'A',  
 and finally a row of 'R' and 'N'.

44 PTS

The third part of the  
 design is a large, bold,  
 stylized letter 'E' made of  
 horizontal bars. To its right  
 is a smaller, more complex  
 shape made of vertical and  
 horizontal bars, resembling a  
 stylized 'C' or 'G'. Below  
 these are two more rows of  
 stylized letters, 'L' and 'S',  
 followed by a row of 'T' and 'A',
